

Berona Structured Slate

Berona slates are manufactured by Cembrit, part of the Cembrit Holding Group, whose headquarters are in Denmark.

Cembrit are among the largest fibre cement manufacturers in Europe, with over 70 years experience, and have established themselves as producers of quality slate for the roofing and cladding industry. Amongst the large range of fibre cement slates available from Cembrit is the **Berona Structured** slate.

This slate has dressed edges and an enhanced structured surface which gives a more aesthetically pleasing effect to the eye of the architect, specifier and client.

This Berona slate also recreates the appearance of a rich traditional stone roofing slate, while having the additional advantage of cost reduction in both product and fixing.

All Cembrit slates are manufactured from a non-asbestos formulation of superior blended synthetic and cellulose fibres and portland cement.

They are produced in accordance with the quality assurance system ISO 9001 and conform to the European Norm EN 492.

Berona Structured slates have a manufacturer backed structural guarantee of 30 years. Due to the fact that these slates are pigmented during production, along with the application of two coats of a high quality semi-matt acrylic coating to both surfaces and edges, Cembrit guarantee the colour of the slate for 20 years.
